Computer Science (Data Science) undergraduate seeking a 12-week on-site IT / Software / Data internship in Karachi, Dec 2026 – Feb 2027

Education

Monash University Malaysia — Selangor, Malaysia
Bachelor of Computer Science (Data Science) — *Year 3, Semester 1 – Currently Enrolled*

- **Relevant coursework:** Data Structures & Algorithms, Database Systems, Database Modelling and Management, Foundations of Data Analysis (ETW2001)

Karachi Grammar School — Karachi, Pakistan
A Levels — *2021 – 2023*

- A* Mathematics; A Physics; A English General Paper; B Computer Science; B Chemistry

Saint Michael's Convent School — Karachi, Pakistan
O Levels — *2019 – 2021*

- 8 A* and 1 A

Experience

Reet Solutions — Jun 2022 – Jul 2022
IT & Digital Operations Intern — *Karachi, Pakistan*

- Supported the planning and execution of digital and social media campaigns for company and client accounts
- Scheduled and published posts across social platforms and helped keep website content up to date
- Tracked basic engagement metrics (reach, likes, follower growth) and helped compile results for the team
- Assisted with day-to-day IT and digital operations tasks, troubleshooting minor issues and organising digital assets

Projects

Young Malaysia Under Pressure | *Vega-Lite, JavaScript, HTML/CSS* — Live site

- Built an interactive data story of 12 Vega-Lite charts and maps from official Malaysian open data (data.gov.my) on youth unemployment, state CPI and household income
- Designed a composite state "pressure index" combining normalised unemployment, cost-of-living change and spending-to-income ratio

APAC Superstore Profitability Dashboard | *R, Shiny, tidyverse, plotly* — GitHub

- Built an R Shiny dashboard with 5 interactive charts and filters, joining retail transactions with World Bank population, inflation and GDP data
- Showed that loss-making orders rise sharply with discount level, and that Furniture combines a high sales share with the weakest margins

Flappy Birb | *TypeScript, RxJS, Vite, Vitest* — Play it

- Wrote a browser game in a purely functional reactive style: every input and timer is a pure reducer folded into one immutable state stream
- Implemented physics, collisions, CSV-driven levels, power-ups and ghost replays of previous runs, with unit tests and automated deployment

Technical Skills

Languages: Python, Java, R, SQL, TypeScript, JavaScript, HTML, CSS
Data & Databases: Relational database design, SQL queries, normalisation, data cleaning, visualisation, statistical analysis
Software Development: Object-oriented programming, data structures & algorithms, debugging, testing, game development, basic frontend
Tools & Libraries: Pandas, NumPy, Matplotlib, R Shiny, tidyverse, plotly, Vega-Lite, RxJS, Vite, Vitest, RStudio, Git/GitHub

Leadership & Community

Monash University Malaysia: Organiser and volunteer across student-led clubs and campus events, coordinating logistics and promoting events
Karachi Grammar School: First Aid Society member; Peer Tutoring Society tutor
The Last Earthlings: Volunteer, beach-cleaning community service initiative
